## Interoffice Correspondence

Massachusetts Institute of Technology Department of Chemical Engineering

**Memorandum to:** Team 11 – Group Members

**From:** Gregory J. McRae

**Subject:** Assignment of ICE Design Topic Spring 2006

**Date:** 67<sup>th</sup> February 2006

Dear Team 11 – Group Members:

One of the challenges in reducing emissions from electricity generation is to remove the  $CO_2$  from the flue gas. Most of the existing power plants in the US and for that matter around the world do not have any  $CO_2$  capture technologies installed. You task for this next week is to explore the issues associated with retrofitting  $CO_2$  capture technologies and develop a suitable options and a plan of attack.

You are not to discuss with your class mates either the technology you have been asked to evaluate or your findings as you progress with your designs. A separate handout describes the structure of the final report.
