## Consider the reaction $\mathrm{C}_{4} \mathrm{H}_{9} \mathrm{Br}+\mathrm{OH}^{-1} \rightarrow \mathrm{C}_{4} \mathrm{H}_{9} \mathrm{OH}+\mathrm{Br}^{-1}$.

When the concentration of $\mathrm{C}_{4} \mathrm{H}_{9} \mathrm{Br}$ is doubled, the rate of the reaction increases by a factor of two. When the concentrations of all reactants and products are doubled, the rate also doubles.

## What is the overall order of the reaction?

1. Zero order
2. First order
3. Second order
4. Third order
5. Fourth order

For the same material, does it take longer for 1 ton to go to $1 / 2$ ton or for 1 gram to go to $1 / 2$ gram?

1. It takes longer to go
from 1 gram to $1 / 2$ gram
2. It takes longer to go
from 1 ton to $1 / 2$ ton
3. The conversion times are equal.
