### 6.003: Signals and Systems

## Fourier Representations

October 27, 2011

## Fourier Representations

Fourier series represent signals in terms of sinusoids.
$\rightarrow$ leads to a new representation for systems as filters.

## Fourier Series

Representing signals by their harmonic components.

$\begin{array}{lllllll}0 & 1 & 2 & 3 & 4 & 5 & 6\end{array} \leftarrow$ harmonic \#

## Musical Instruments

Harmonic content is natural way to describe some kinds of signals.
Ex: musical instruments (http://theremin.music.uiowa.edu/MIS.html)

## Musical Instruments

Harmonic content is natural way to describe some kinds of signals.
Ex: musical instruments (http://theremin.music.uiowa.edu/MIS.html)

## Musical Instruments

Harmonic content is natural way to describe some kinds of signals.
Ex: musical instruments (http://theremin.music.uiowa.edu/MIS.html)

## Harmonics

Harmonic structure determines consonance and dissonance.

## Harmonic Representations

What signals can be represented by sums of harmonic components?

Only periodic signals: all harmonics of $\omega_{0}$ are periodic in $T=2 \pi / \omega_{0}$.

## Harmonic Representations

Is it possible to represent ALL periodic signals with harmonics? What about discontinuous signals?

Fourier claimed YES - even though all harmonics are continuous!
Lagrange ridiculed the idea that a discontinuous signal could be written as a sum of continuous signals.
We will assume the answer is $\mathrm{YES}_{9}$ and see if the answer makes sense.

## Separating harmonic components

Underlying properties.

1. Multiplying two harmonics produces a new harmonic with the same fundamental frequency:

$$
e^{j k \omega_{0} t} \times e^{j l \omega_{0} t}=e^{j(k+l) \omega_{0} t}
$$

2. The integral of a harmonic over any time interval with length equal to a period $T$ is zero unless the harmonic is at DC:

$$
\begin{aligned}
\int_{t_{0}}^{t_{0}+T} e^{j k \omega_{0} t} d t \equiv \int_{T} e^{j k \omega_{0} t} d t & = \begin{cases}0, & k \neq 0 \\
T, & k=0\end{cases} \\
& =T \delta[k]
\end{aligned}
$$

## Separating harmonic components

Assume that $x(t)$ is periodic in $T$ and is composed of a weighted sum of harmonics of $\omega_{0}=2 \pi / T$.

$$
x(t)=x(t+T)=\sum_{k=-\infty}^{\infty} a_{k} e^{j \omega_{0} k t}
$$

Then

$$
\begin{aligned}
\int_{T} x(t) e^{-j l \omega_{0} t} d t & =\int_{T} \sum_{k=-\infty}^{\infty} a_{k} e^{j \omega_{0} k t} e^{-j \omega_{0} l t} d t \\
& =\sum_{k=-\infty}^{\infty} a_{k} \int_{T} e^{j \omega_{0}(k-l) t} d t \\
& =\sum_{k=-\infty}^{\infty} a_{k} T \delta[k-l]=T a_{l}
\end{aligned}
$$

Therefore

$$
a_{k}=\frac{1}{T} \int_{T} x(t) e^{-j \omega_{0} k t} d t \quad=\frac{1}{T} \int_{T} x(t) e^{-j \frac{2 \pi}{T} k t} d t
$$

## Fourier Series

Determining harmonic components of a periodic signal.

$$
\begin{aligned}
a_{k}=\frac{1}{T} \int_{T} x(t) e^{-j \frac{2 \pi}{T} k t} d t & \text { ("analysis" equation) } \\
x(t)=x(t+T)=\sum_{k=-\infty}^{\infty} a_{k} e^{j \frac{2 \pi}{T} k t} & \text { ("synthesis" equation) }
\end{aligned}
$$

## Check Yourself

Let $a_{k}$ represent the Fourier series coefficients of the following square wave.

How many of the following statements are true?

1. $a_{k}=0$ if $k$ is even
2. $a_{k}$ is real-valued
3. $\left|a_{k}\right|$ decreases with $k^{2}$
4. there are an infinite number of non-zero $a_{k}$
5. all of the above

## Check Yourself

Let $a_{k}$ represent the Fourier series coefficients of the following square wave.

$$
\begin{aligned}
a_{k} & =\int_{T} x(t) e^{-j \frac{2 \pi}{T} k t} d t=-\frac{1}{2} \int_{-\frac{1}{2}}^{0} e^{-j 2 \pi k t} d t+\frac{1}{2} \int_{0}^{\frac{1}{2}} e^{-j 2 \pi k t} d t \\
& =\frac{1}{j 4 \pi k}\left(2-e^{j \pi k}-e^{-j \pi k}\right) \\
& =\left\{\begin{array}{cl}
\frac{1}{j \pi k} ; & \text { if } k \text { is odd } \\
0 ; & \text { otherwise }
\end{array}\right.
\end{aligned}
$$

## Check Yourself

Let $a_{k}$ represent the Fourier series coefficients of the following square wave.

$$
a_{k}=\left\{\begin{array}{cl}
\frac{1}{j \pi k} ; & \text { if } k \text { is odd } \\
0 ; & \text { otherwise }
\end{array}\right.
$$

How many of the following statements are true?

1. $a_{k}=0$ if $k$ is even
2. $a_{k}$ is real-valued $\times$
3. $\left|a_{k}\right|$ decreases with $k^{2} \times$
4. there are an infinite number of non-zero $a_{k}$
5. all of the above $X$

## Check Yourself

Let $a_{k}$ represent the Fourier series coefficients of the following square wave.

How many of the following statements are true? 2

1. $a_{k}=0$ if $k$ is even
2. $a_{k}$ is real-valued $\times$
3. $\left|a_{k}\right|$ decreases with $k^{2} \quad \times$
4. there are an infinite number of non-zero $a_{k}$
5. all of the above $X$

## Fourier Series Properties

If a signal is differentiated in time, its Fourier coefficients are multiplied by $j \frac{2 \pi}{T} k$.
Proof: Let

$$
x(t)=x(t+T)=\sum_{k=-\infty}^{\infty} a_{k} e^{j \frac{2 \pi}{T} k t}
$$

then

$$
\dot{x}(t)=\dot{x}(t+T)=\sum_{k=-\infty}^{\infty}\left(j \frac{2 \pi}{T} k a_{k}\right) e^{j \frac{2 \pi}{T} k t}
$$

## Check Yourself

Let $b_{k}$ represent the Fourier series coefficients of the following triangle wave.

How many of the following statements are true?

1. $b_{k}=0$ if $k$ is even
2. $b_{k}$ is real-valued
3. $\left|b_{k}\right|$ decreases with $k^{2}$
4. there are an infinite number of non-zero $b_{k}$
5. all of the above

## Check Yourself

The triangle waveform is the integral of the square wave.

Therefore the Fourier coefficients of the triangle waveform are $\frac{1}{j 2 \pi k}$ times those of the square wave.

$$
b_{k}=\frac{1}{j k \pi} \times \frac{1}{j 2 \pi k}=\frac{-1}{2 k^{2} \pi^{2}} ; k \text { odd }
$$

## Check Yourself

Let $b_{k}$ represent the Fourier series coefficients of the following triangle wave.

$$
b_{k}=\frac{-1}{2 k^{2} \pi^{2}} ; k \text { odd }
$$

How many of the following statements are true?

1. $b_{k}=0$ if $k$ is even
2. $b_{k}$ is real-valued
3. $\left|b_{k}\right|$ decreases with $k^{2}$
4. there are an infinite number of non-zero $b_{k}$
5. all of the above $\sqrt{ }$

## Check Yourself

Let $b_{k}$ represent the Fourier series coefficients of the following triangle wave.

How many of the following statements are true? 5

1. $b_{k}=0$ if $k$ is even
2. $b_{k}$ is real-valued
3. $\left|b_{k}\right|$ decreases with $k^{2}$
4. there are an infinite number of non-zero $b_{k}$
5. all of the above

## Fourier Series

One can visualize convergence of the Fourier Series by incrementally adding terms.

Example: triangle waveform

## Fourier Series

## Fourier Series

One can visualize convergence of the Fourier Series by incrementally adding terms.

Example: square wave

## Fourier Series

Partial sums of Fourier series of discontinuous functions "ring" near discontinuities: Gibb's phenomenon.

This ringing results because the magnitude of the Fourier coefficients is only decreasing as $\frac{1}{k}$ (while they decreased as $\frac{1}{k^{2}}$ for the triangle). You can decrease (and even eliminate the ringing) by decreasing the magnitudes of the Fourier coefficients at higher frequencies.

## Fourier Series: Summary

Fourier series represent periodic signals as sums of sinusoids.

- valid for an extremely large class of periodic signals
- valid even for discontinuous signals such as square wave

However, convergence as \# harmonics increases can be complicated.

## Filtering

The output of an LTI system is a "filtered" version of the input.

Input: Fourier series $\rightarrow$ sum of complex exponentials.

$$
x(t)=x(t+T)=\sum_{k=-\infty}^{\infty} a_{k} e^{j \frac{2 \pi}{T} k t}
$$

Complex exponentials: eigenfunctions of LTI systems.

$$
e^{j \frac{2 \pi}{T} k t} \rightarrow H\left(j \frac{2 \pi}{T} k\right) e^{j \frac{2 \pi}{T} k t}
$$

Output: same eigenfunctions, amplitudes/phases set by system.

$$
x(t)=\sum_{k=-\infty}^{\infty} a_{k} e^{j \frac{2 \pi}{T} k t} \rightarrow y(t)=\sum_{k=-\infty}^{\infty} a_{k} H\left(j \frac{2 \pi}{T} k\right) e^{j \frac{2 \pi}{T} k t}
$$

## Filtering

Notion of a filter.

LTI systems

- cannot create new frequencies.
- can scale magnitudes and shift phases of existing components.

Example: Low-Pass Filtering with an RC circuit

## Lowpass Filter

Calculate the frequency response of an RC circuit.

## Lowpass Filtering

Let the input be a square wave.

$$
x(t)=\sum_{k \text { odd }} \frac{1}{j \pi k} e^{j \omega_{0} k t} ; \quad \omega_{0}=\frac{2 \pi}{T}
$$

## Lowpass Filtering

Low frequency square wave: $\omega_{0} \ll 1 / R C$.

$$
x(t)=\sum_{k \text { odd }} \frac{1}{j \pi k} e^{j \omega_{0} k t} ; \quad \omega_{0}=\frac{2 \pi}{T}
$$

## Lowpass Filtering

Higher frequency square wave: $\omega_{0}<1 / R C$.

$$
x(t)=\sum_{k \text { odd }} \frac{1}{j \pi k} e^{j \omega_{0} k t} ; \quad \omega_{0}=\frac{2 \pi}{T}
$$

## Lowpass Filtering

Still higher frequency square wave: $\omega_{0}=1 / R C$.

$$
x(t)=\sum_{k \text { odd }} \frac{1}{j \pi k} e^{j \omega_{0} k t} ; \quad \omega_{0}=\frac{2 \pi}{T}
$$

## Lowpass Filtering

High frequency square wave: $\omega_{0}>1 / R C$.

$$
x(t)=\sum_{k \text { odd }} \frac{1}{j \pi k} e^{j \omega_{0} k t} ; \quad \omega_{0}=\frac{2 \pi}{T}
$$

## Fourier Series: Summary

Fourier series represent signals by their frequency content.

Representing a signal by its frequency content is useful for many signals, e.g., music.

Fourier series motivate a new representation of a system as a filter.
