Mapping Rule (bij)
A bijection from
A to $B$ implies
$|A|=|B|$
for finite $A, B$

```
*6
M,
\(A:\left\{a_{0}, a_{1}, a_{2}, a_{3}, a_{4}, \ldots, a_{n-1}\right\}\) subset: \(\left\{a_{0}, a_{2}, a_{3}, \ldots, a_{n-1}\right\}\)
    string: 1 0 0 1 1 0 0
this defines a bijection, so
    # n-bit strings = |pow(A)|
```
