D2Hawkeye

- Founded by Chris Kryder, MD, MBA in 2001
- Combine expert knowledge and databases with analytics to improve quality and cost management in healthcare
- Located in Massachusetts USA, grew very fast and was sold to Verisk Analytics in 2009

D2Hawkeye

Healthcare Case Management

- D2Hawkeye tries to improve healthcare case management
 - Identify high-risk patients
 - Work with patients to manage treatment and associated costs
 - Arrange specialist care
- Medical costs often relate to severity of health problems, and are an issue for both patient and provider
- Goal: improve the quality of cost predictions

Impact

- Many different types of clients
 - Third party administrators of medical claims
 - Case management companies
 - Benefit consultants
 - Health plans
- Millions of people analyzed monthly through analytic platform in 2009
- Thousands of employers processed monthly

Pre-Analytics Approach

- Human judgment MDs manually analyzed patient histories and developed
- Limited data sets
- Costly and inefficient
- Can we use analytics instead?

Data Sources

- Healthcare industry is data-rich, but data may be hard to access
 - Unstructured doctor's notes
 - Unavailable hard to get due to differences in technology
 - Inaccessible strong privacy laws around healthcare data sharing
- What is available?

Data Sources

- Claims data
 - Requests for reimbursement submitted to insurance companies or state-provided insurance from doctors, hospitals and pharmacies.
- Eligibility information
- Demographic information

Claims Data

| | ProviderName | DiagCode | DiagDesc | Source | SourceDiagDesc | ProcNDC | ProcNDCDesc | ServiceDate | Pair | Amount |
|-----|---|----------|--|--------|---|---------|--|-------------|------|--------|
| DEN | SOUTHEASTERN MINNESOTA ORAL & MAX | DD0238 | Dental Diseases | 5206 | Unspecified Anomaly of Tooth Position | DD007 | Anesthesia - General | 4/22/2005 | \$ | - |
| DEN | ASSOCIATED ORAL & MAXILLOFACIAL SURGEONS PA | DD0238 | Dental Diseases | 5206 | Disturbances in ToOther Eruption | DD025 | Dental | 7/8/2005 | \$ | 272.68 |
| DEN | CENTRAL FLORIDA ORAL SURGERY | DD0238 | Dental Diseases | 5206 | Disturbances in ToOther Eruption | DD025 | Dental | 11/11/2005 | \$ | 568.13 |
| Med | ALPHARETTA INTERNA | DD0004 | ENT and Upper Resp Disorders | 4610 | Acute Maxillary Sinusitis | DD147 | Office Visit - Established Patient | 5/26/2005 | \$ | 125.85 |
| Med | CUMMING FAMILY MEDICINE | DD0170 | Neurotic and Personality Disorders | 30000 | Neurotic Disorders- 30000 | DD149 | Office Visit - New Patient | 6/20/2005 | \$ | - |
| Med | ATLANTA WOMENS HEALTH GROUP- 582483738.20 | DD0102 | Screening | V776 | Special Screening for Cystic Fibrosis | DD077 | Lab - Blood Tests | 7/29/2005 | \$ | 1.52 |

Claims Data

- Rich, structured data source
- Very high dimension
- Doesn't capture all aspects of a persons treatment or health – many things must be inferred
- Unlike electronic medical records, we do not know the results of a test, only that a test was administered

D2Hawkeye's Claims Data

• Available: claims data for **2.4 million people** over a span of **3 years**

"Observation" Period 2001-2003

• Include only people with data for at least 10 months in both periods – **400,000 people**

Variables

Variables – Cost Profiles

15.071x – Keeping an Eye on Healthcare Costs: The D2Hawkeye Story

Additional Variables

- Chronic condition cost indicators
- 269 medically defined risk rules
 - Interactions between illnesses
 - Interactions between diagnosis and age
 - Noncompliance to treatment
 - Illness severity
- Gender and age

obesity - depression

Cost Variables

Medical Interpretation of Buckets

Error Measures

- Typically we use R² or accuracy, but others can be used
- In case of D2Hawkeye, failing to classify a high-cost patient correctly is worse than failing to classify a low-cost patient correctly
- Use a "penalty error" to capture this asymmetry

Penalty Error

- Key idea: use asymmetric penalties
- Define a "penalty matrix" as the cost of being wrong

| | | Outcome | | | | | |
|-----|---|---------|---|---|---|---|--|
| | | 1 | 2 | 3 | 4 | 5 | |
| | 1 | 0 | 2 | 4 | 6 | 8 | |
| ast | 2 | 1 | 0 | 2 | 4 | 6 | |
| tec | 3 | 2 | 1 | 0 | 2 | 4 | |
| Fo | 4 | 3 | 2 | 1 | 0 | 2 | |
| | 5 | 4 | 3 | 2 | 1 | 0 | |

Baseline

- Baseline is to simply predict that the cost in the next "period" will be the cost in the current period
- Accuracy of 75%
- Penalty Error of 0.56

Multi-class Classification

- We are predicting a bucket number
- Example

Most Important Factors

• First splits are related to cost

Secondary Factors

- Risk factors
- Chronic Illness
- "Q146"
 - Asthma + depression
- "Q1"
 - Risk factor indicating hylan injection
 - Possible knee replacement or arthroscopy

Example Groups for Bucket 5

- Under 35 years old, between \$3300 and \$3900 in claims, C.A.D., but no office visits in last year
- Claims between \$3900 and \$43000 with at least \$8000 paid in last 12 months, \$4300 in pharmacy claims, acute cost profile and cancer diagnosis
- More than \$58000 in claims, at least \$55000 paid in last 12 months, and not an acute profile

Results

| | Accu | ıracy | Penalty Error | | | |
|--------|-------|----------|---------------|----------|--|--|
| Bucket | Trees | Baseline | Trees | Baseline | | |
| All | 80% | 75% | 0.52 | 0.56 | | |
| 1 | 85% | 85% | 0.42 | 0.44 | | |
| 2 | 60% | 31% | 0.89 | 0.96 | | |
| 3 | 53% | 21% | 1.01 | 1.37 | | |
| 4 | 39% | 19% | 1.01 | 1.72 | | |
| 5 | 30% | 23% | 1.01 | 1.88 | | |

Insights

- Substantial improvement over the baseline
- **Doubled accuracy** over baseline in some cases
- Smaller accuracy improvement on **bucket 5**, but **much lower penalty**

Analytics Provide an Edge

- Substantial improvement in D2Hawkeye's ability to identify patients who need more attention
- Because the model was interpretable, physicians were able to improve the model by identifying new variables and refining existing variables
- Analytics gave D2Hawkeye an edge over competition using "last-century" methods
